

1999 Virginia Open

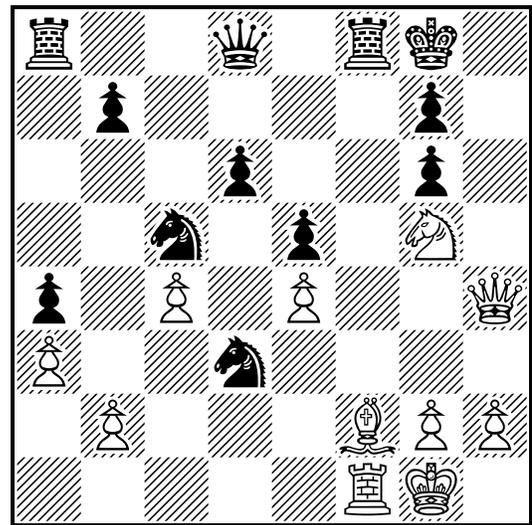

THE 1999 VIRGINIA OPEN played Jan 22-24 in Fredricksburg, saw a 3-way tie for 1st in the Open section between Adrian Negulescu, Emory Tate & Leonid Filatov. Each scored 4-1. Lance Rackham tallied 5^{1/2}-1^{1/2} to claim clear 1st in the Amateur section.

The Open winners rose to the top by different methods. Negulescu, a visiting IM from Rumania, took the “professional” route, jumping out 3-0 and then taking it easy on the last day, drawing fellow IMs Larry Kaufman and Richard Delaune in fairly bloodless fashion. Tate, a co-winner last year as well, had to fight back from behind this time after losing to Negulescu in round 3. He accomplished the task in fine style, jumping all over Kaufman right out of the opening in the final round. Filatov executed the semi Swiss Gambit, conceding a draw in the very first round and piling up points thereafter against mostly lower-rated opposition.

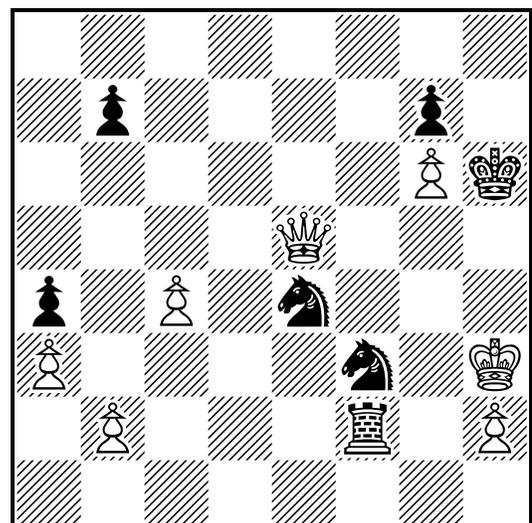

Larry Kaufman - Emory Tate Sicilian

41 h4 Rf2+ 42 Kh1 Nf3 (setting up the winning
Rh2+) 43 Qh8+ (if 43 Qf4+ Kh5 44 Qf5+ Neg5!
ends it) 43...Kxg6 44 Qe8+ Kf5 45 Qd8 Kf4 46
Qc7+ Ke3 47 Qb6+ Ke2 0-1

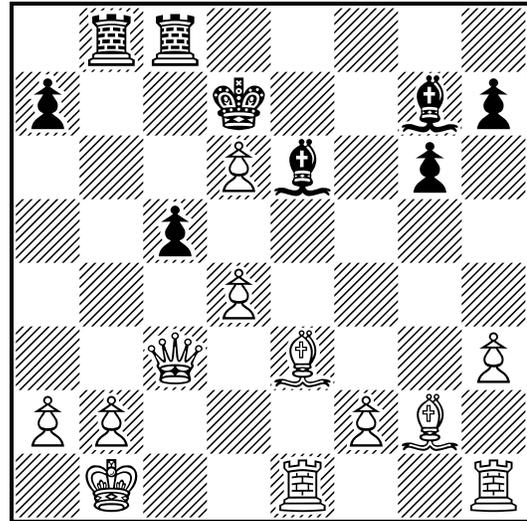

IMs Delaune & Kaufman, plus Stan Fink, Frank Gomez, Ron Nichols & Marvin Lazo scored 3½ points to tie for 4th and various class prizes. The scholastic prizewinner was Jeremy Hummer, rated 1681, who beat players rated 2003 & 1932, plus drew versus 2149.

The following tense last round game is from the top board in the Amateur. Prevost entered the contest in clear first with 5-0, but Rackham took the battle to him.

David Prevost - Lance Rackham

43 Rc7+?? (43 Re2! leads to the capture of Black's pawn. There are interesting tactics after 43...Kb5 but I think it all fizzles towards a draw: 43...Kb5 (43...Kd3 44 Re3+! Kc4 45 Re2) 44 Rxc2 Bb2+ 45 Kd1 Rxc2 46 Rb7+ Ka5 47 Rxb4 Kxb4 48 Kxc2 Bf6 is one possibility.) 43...Rxc7 44 Bxc7 Rb1+ 0-1

Prevost thus fell to a tie for 2nd with Jamarl Thomas, Stephen Jablon & Marvin Wilson. Under 1700 winners were James Barko & Daniel Talbert. Under 1500 saw a 7-way tie (!) among Leonard Holloway, Kenneth Lovering, Darryl Rue, Darrell Faulkner, Jiri Kovats, Phillip Shing & Jason Hart. Nelson Lopez was top under 1300, and David Shiffer was top under 1100. Daniel Ludwinski was the top scholastic player in the Amateur.

A total of 131 players enjoyed the well-lit and spacious playing room at the Fredericksburg Sheraton. Kudos to organizers Helen Hinshaw and Catherine Clark! Michael Atkins and Paul Dame directed for the VCF. Thanks are also due Atkins for providing information used in producing this report. Virginia Chess strives to offer a variety of content. Naturally it is games, analyses and news that comprise the greater part of our material, but occasionally an opportunity arises to present something different or even unique. And so we are very pleased to showcase this contribution from a VCF member, not only for the appeal it may hold for some readers but also for the demonstration to future contributors that there is room in these pages for any and all aspects of the Royal Game.

THE

PRO

QU

ARTAO

PROB

G L Honaker, Jr is a science and mathematics teacher in Bristol, Virginia. He enjoys prime number theory and uses chess as an educational tool in the classroom. He won the Top Unrated prize at his first rated tournament, the 1996 Virginia Closed, from which he provided the following sample of his play: Darby - Honaker, Sicilian: 1 e4 c5 2 Nf3 e6 3 d4 cxd4 4 Nxd4 Nf6 5 Nc3 d6 6 Bd3 a6 7 0-0 Be7 8 f4 Qc7 9 Nf3 b5 10 Kh1 Bb7 11 Qe2 0-0 12 e5 dxe5 13 Nxe5 Nc6 14 Nf3 Nb4 15 Bd2 Nxd3 16 Qxd3 Rfd8 17 Qe2 Rd7 18 Ne5 Rdd8 19 a3 Bd6 20 Rad1 Bxe5 21 fxe5 Nd5 22 Nxd5 Bxd5 23 Qe1 Qxc2 24 Rf2 Qc6 25 Rc1 Qd7 26 Rc3 Rac8 27 Rh3 Rc2 28 Qb1 Be4 29 Rc3 Rxc3 30 Qxe4 Qxd2 31 Kg1 Rc1+ 32 Rf1 Rxf1+ 33 Kxf1 Qxb2 34 Qf3 Qxe5 35 h3 Qf5 0-1

by Mike Keith

The article at hand discusses a chess-based puzzle created by Honaker. The actual author of the text, Mike Keith, is a computer consultant who lives in Salem, Oregon and enjoys exploring the uses of computers in recreational mathematics and linguistics. Contact him — or simply marvel at the “World of Words, Numbers, and Notes” — by pointing your browser to <http://users.aol.com/s6sj7gt/mikehome.htm>

Recognizing that not all chess players are mathematicians, it seems appropriate to provide a brief layman’s introduction to what follows. Recall from your school days that a prime number is a whole number whose only factors are itself and one. For example, 2 and 3 are primes, but 4 is not because $4 = 2 \times 2$. Likewise 5, 7 and 11 are prime, but not 6 ($= 2 \times 3$), 8 (4×2), 9 (3×3) or 10 (5×2). In general, no even number beyond 2 can be prime because they all equal something times two. (Note, however, that 1999 is a “prime year!”)

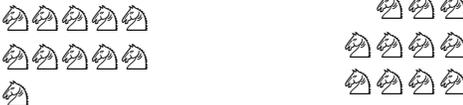

For the purposes of what follows, it might be useful to think of primes as those numbers that cannot be represented by arranging objects rectangularly into rows and columns. (see box)

Interested readers may contact Mr Honaker via email at sci-tchr@3wave.com Those who get hooked on this sort of thing might also want to check out More Prime Patterns at <http://www.geocities.com/CapeCanaveral/Launchpad/4057/MorePrimes.htm>

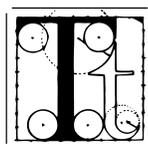

Have fun! -ed.

15 knights can be arranged as three rows of exactly five, so it's *not* prime

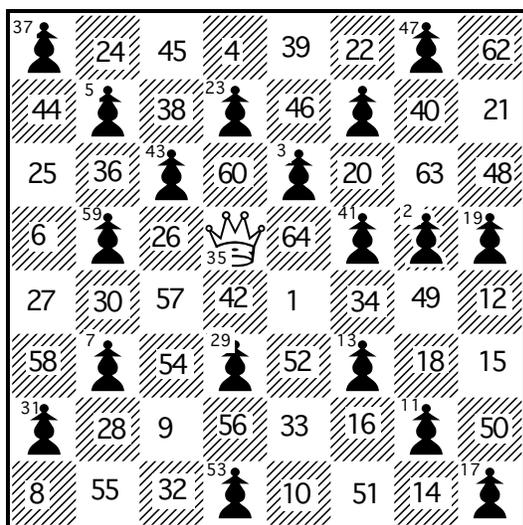

Try to arrange a rectangle of 11 knights, on the other hand, and you're always stuck with leftovers, no matter how many rows/columns you use (except 1x11). Eleven is prime!

HIS INTERESTING PROBLEM

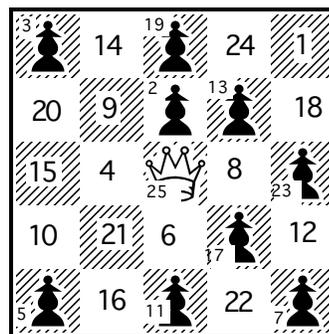

was posed by G L Honaker, Jr in November of 1998. First, create any knight's tour on an $n \times n$ chessboard, in which the knight starts on any square of the board and by successive knight's moves visits every square on the board exactly once. Number the squares visited by the knight in order starting with 1 for the starting square. When you are done, place a Queen on any square and count the number of prime numbers attacked by the Queen (note that the Queen is not considered to be attacking the square it sits on). Now, the problem: **What is the largest number of primes that can be attacked by the Queen, for any placement of the Queen and any knight's tour?**

First, note that there are 18 primes between 1 and 64. Amazingly, there is a *perfect* knight's tour in which all 18 primes can be attacked! Here it is, found by an approximately 12-hour computer search:

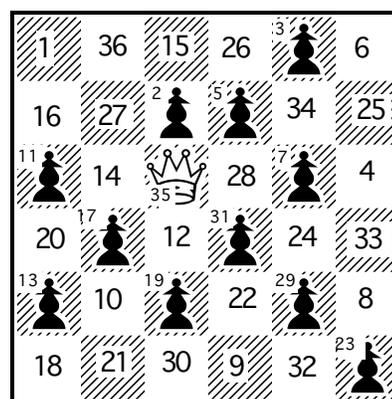

where the location of the Queen is d5 and the attacked primes are indicated by pawns.

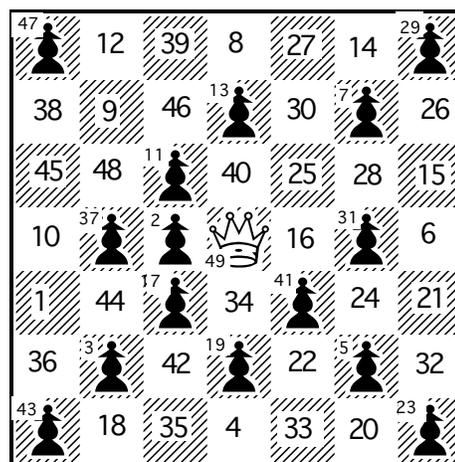

Knights tours are impossible on 1x1, 2x2, 3x3, 4x4 boards, but it is natural to ask the same question for any $n \times n$ board, with $n \geq 5$. Here are perfect solutions for 5x5 through 7x7 (all by M Keith):

5x5 board - 9 of 9 primes

6x6 board - 11 of 11 primes

7x7 board - 15 of 15 primes

The table below includes these values of $Q(n)$ as well as some larger values of n (whose full boards we do not show for space reasons). The last column shows the total number of primes in the array.

n	$Q(n)$	Total primes
5	9	9
6	11	11
7	15	15
8	18	18
9	19	22
10	20	25
11	22	30
12	23	34

Note that 8x8 is the largest one for which we have found a perfect solution. As n increases it appears to become harder to achieve perfection, and a moment's thought shows why this is the case. Assume n is even (a similar argument works for n odd). Since the dark squares (or light squares) on the chessboard always contain numbers with the same parity, due to the properties of a knight's tour, the most odd numbers that can be attacked by a Queen is $3n-5$, which happens when the Queen sits on one of the two central odd numbers. If all of these were primes, and if the Queen also attacked the prime 2, then there could be at most $3n-4$ primes attacked. On the other hand, there are $\pi(n^2)$ primes [the number of primes $\leq n^2$] in the array. This grows faster than linearly, so it becomes harder and harder to reach, since $3n-4$ grows linearly.

Denote by $M(n)$ the most number of primes that could ever be attacked in an $n \times n$ grid, as described in the previous paragraph. Then, $M(n) = 3n-4$ for n even and $4\lceil n/4 \rceil + 2n - 1$ for n odd. The growth argument means that for all n sufficiently large a perfect attack configuration is impossible. This first happens for $n=11$, since then $M(n) = 4\lceil n/4 \rceil + 2n - 1 = 29$ whereas $\pi(121)=30$. So we have:

Theorem:

A perfect configuration is impossible for $n \geq 11$.

In fact, the above evidence suggests:

Conjecture:

A perfect configuration is possible only for $n = 5, 6, 7,$ and 8 .

We can define a *quasi-perfect* configuration as one that attacks not $\pi(n)$ primes but rather $M(n)$, the maximum amount possible when $n \geq 11$. In contrast to perfectness, it should be *easier* to be quasi-perfect as n becomes larger. What, we wonder, is the smallest value of n for which a quasi-perfect configuration is possible?

Some other open questions:

- (1) Are the above values of $Q(n)$ really the best? Is the conjecture true?
- (2) What's the best that can be achieved if the knight's tour is required to be closed (reentrant)? (Late-breaking news: I can attack 16 on an 8x8 board in a reentrant tour.)
- (3) What's the best score for larger values of n ?
- (4) What's the best score attainable for other chess or fairy chess pieces?

JEFFERSON OPEN

Macon Shibut swept through the field to post a 5-0 score and clear 1st place at the Jefferson Open, in Charlottesville, December 5-6. The winner caught a slight break in that his closest competition, Frederick Kagan, had taken an irrevocable 1/2-point bye at registration. This short circuited what otherwise would have been a last round showdown between the two masters. As it was Shibut defeated #s 3, 4 and 5 on the wallchart *en route* to the winner's circle.

Alan Brownstein - Macon Shibut King's Gambit

Notes by Macon Shibut

1 e4 e5
2 f4

Oh, no. I'd forgotten that Brownstein plays this, else I would have chosen a different first move. My intention was to roll out of Philidor's countergambit 1 e4 e5 2 Nf3 d6 3 d4 f5!? for another workout (see my articles in various prior issues of *Virginia Chess*). Alas, Alan hit me with his nineteenth century opening before I had a chance to land my own.

Nonetheless, I did not proceed unarmed. Six years ago, while preparing my book on Paul Morphy, I examined quite a few Kings Gambits.

The traditional defense consists of what someone (Tarrasch, I think) once termed the "suicide move," 2...exf4 3 Nf3 g5!? The thing to understand is that this grotesque-looking, "anti-positional" bid to secure the gambit pawn is not sheer materialism, but in fact has a positional (!) motivation, namely to keep the f-file — absolutely the key artery of White's prospective attack — blocked. For

his part White may be willing to sacrifice *real* material if that's what it takes to clear the f-file blockage.

Black's plan succeeds more or less against the old-style developing continuation 4 Bc4 (the Hanstein/Philidor gambits) because after 4...Bg7 his *king rook* is defended and thus he's ready to maintain the pawn chain — and the f4 clog — in case of 5 h4 h6 etc. For precisely this reason, the "modern" continuation for White is considered to be 4 h4! (Kieseritsky). Now 4...h6 doesn't work, so we get 4...g4 5 Ne5 (5 Ng5 is also possible but after 5...h6 the knight has no safe squares so White is already committed to the major sacrifice 6 Nxf7) and now either 5...Nf6 or 5...d6, in either case with a rich, full game where White inevitably achieves Bxf4 and at least some chances on the f-line. The Spassky-Fischer game from Mar del Plata 1960 is doubtless the most famous contemporary example: 5...Nf6 6 d4 d6 7 Nd3 Nxe4 8 Bxf4 Bg7 9 Nc3 Nxc3 10 bxc3 c5 11 Be2 cxd4 12 0-0 Nc6

20 Grand Prix points

13 Bxg4 0-0 14 Bxc8 Rxc8 15 Qg4 f5 16 Qg3 dxc3 17 Rae1 Kh8 18 Kh1 Rg8 19 Bxd6 Bf8 20 Be5+ Nxe5 21 Qxe5+ Rg7 22 Rxf5 Qxh4+ 23 Kg1 Qg4 24 Rf2 Be7 25 Re4 Qg5 26 Qd4 Rf8 27 Re5 Rd8 28 Qe4 Qh4 29 Rf4 1-0

As a direct reaction to this experience, Bobby Fischer put the King's Gambit under his microscope and published an article, "A Bust to the King's Gambit," in the Summer 1961 issue of *American Chess Quarterly*. Fischer's recommendation was 3...d6. He called this a "high-class waiting move," the point being in essence to transpose to the Hanstein/Philidor variety of the ...g5 defense complex while excluding the 

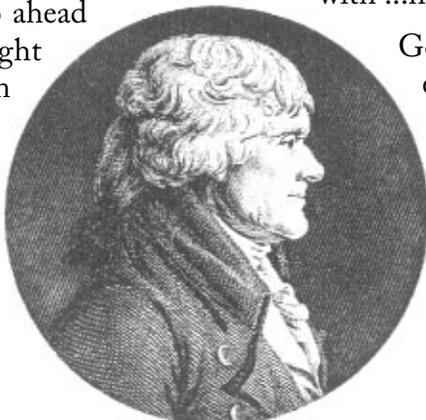

possibility of White reaching the preferred Kieseritsky version. Let us see how this works.

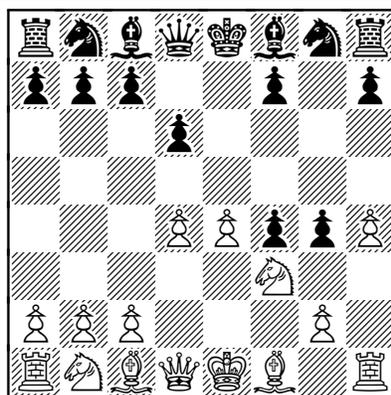

From the diagram, suppose White goes 4 Bc4. Black will respond 4...h6! and White is in a bit of a quandary. Sure he can play 5 h4?! but in the present circumstances — no pawn chain as of yet — the h-pawn looks ridiculous. Is this why White sacrificed a pawn, in order to follow up with such a preventative move? 5...Nf6, 5...Bg4, — any sort of normal play should be okay for Black. But other 5th moves by White — 5 0-0; 5 d4 — let Black get in 5...g5 Δ if 6 h4 h6 etc arriving safely in the Hanstein/Philidor lagoon.

Returning to the diagram, White can also go 4 d4. The threat Bxf4 impels Black to go ahead with 4...g5 straight away. Based on what we've seen, it might seem that 5 h4 should follow as a matter of course. But now the subtle merits of the Fischer move order come to the fore. 5...g4.

Thomas Jefferson

Compared to the normal Kieseritsky gambit, both sides' d-pawns have moved. The upshot is that White doesn't have the normal Ne5 hop! Either he plunges ahead with the dubious piece sacrifice 6 Ng5 (which is, incidentally, even more suspect here than in the position without the d-pawns' moves) or he plays the utterly un-gambit-like retreat 6 Ng1, after which the battle continues but it should go without saying that Black has improved his chances relative to the normal Kieseritsky lines.

If White does not want play *à la* Kieseritsky 5 h4, then naturally he goes 5 Bc4, whereupon 5...Bg7 and Black is again all set for maintaining his pawn chain with ...h6 as necessary.

Going back still earlier, mention is also due the King's Bishop's Gambit, 1 e4 e5 2 f4 exf4 3 Bc4! — a whole 'nother story! I will not elaborate it here but

note that since the time of Fischer's article, many of those grandmasters who venture the King's Gambit have favored the Bishop's form, beginning with Fischer himself and more recently Judith Polgar, Nigel Short, Vassily Ivanchuk, etc. Presumably this is in large part a reaction against 3 Nf3 d6!

This concludes our brief tutorial, but I will close with an additional editorial comment: Fischer's use of the word "bust" seems rather strong. Black can indeed circumvent the Kieseritsky gambit, but merely reaching Hanstein/Philidor territory is no guarantee of success. The cast of players who have *voluntarily* gone this route as White, answering 3...g5 with 4 Bc4 even though 4 h4 was available, is an exalted troupe: Anderssen, Morphy, Steinitz, Blackburne, Zukertort, Tchigorin, Lasker, Marshall, Reti, Capablanca... A case can be made that Fischer's whole point is moot since the Hanstein/Philidor complex promises more to the first player than Kieseritsky's "loosening" 4 h4 in any event.

2 ... d6!?

I learned this finesse from Jack Mayer. It looks like a cramped Kings Gambit Declined but in fact Black plans to take the pawn next turn. (3 fxe5?? Qh4+) This is a clever way to introduce the Fischer Defense because White *invariably* plays...

3 Nf3

whereupon there follows...

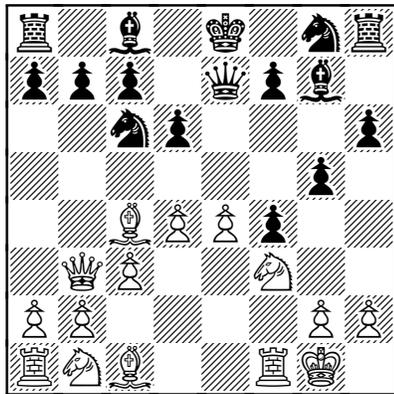

3 ... exf4

and we've tricked White out of any chance to play the Bishop's Gambit, just in case that's what he intended!

4 d4 g5

6 0-0 Nc6
7 c3 h6
8 Qb3 Qe7

The particular move order by which we arrived at this position gave Black an additional option, 8...Qd7(!) Δ Na5. Considering it it now, I have to say that I like the looks of it, but during the game it was hard to discard what I knew to be the main line for the sake of sticking my queen in front of my queen's bishop.

And so 8...Qe7, and we have reached a *tabiya*, a set position from which many games have diverged onto different paths. White can play a simple developing move here — 9 Nbd2 or Na3, say, — but Black is on the brink of developing his king knight and castling without incident. Sooner or later White will have to come back to the strategic imperative of undermining Black's pawn chain

and prying open the f-file, and practice suggests that he might best get to it straight away. He has two devices for doing the job: h4 after all (Philidor), or g3 (Hanstein).

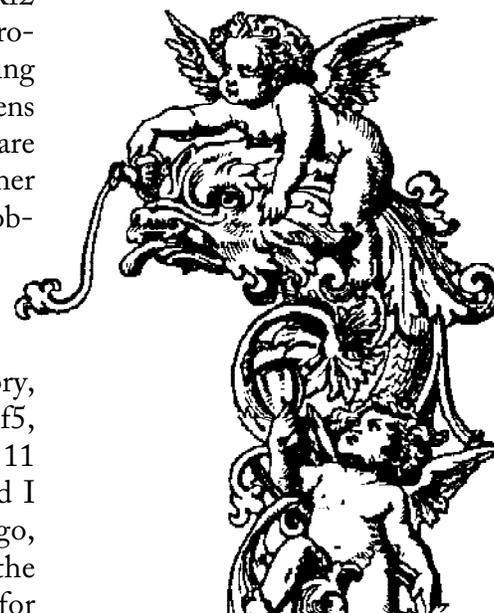

Fischer's analysis highlights the Philidor method, giving as a main line 9 h4 Nf6! (Black is not deterred by the threat to his g-pawn) 10 hxg5 hxg5 11 Nxc5 Nxe4 (11...Nxd4!? has also been tried with success) 12 Bxf7+ Kd8 13 Nxe4 Qxe4 14 Bxf4 Nxd4!

As for 9 g3 (which could also have been tried on moves 6, 7, or 8, each case posing different problems in detail but the same general theme), Black's fundamental reaction is 9...g4 followed by ...f3 after White's knight moves away. Fischer endorses a variation he attributes to Nimzowitsch (offhand I don't know where from): 9 g3 g4 10 Nh4 f3 11 Nf5 Bxf5 12 exf5 (12 Qxb7 Rb8 13 Qxc6+ Qd7≠) 0-0-0 13 Bxf7 Qe2 14 Qe6+ (14 Rf2 Nxd4! 15 Rxe2 fxe2) Rd7! introducing the idea ...Nd8 winning a piece. White can't trade queens as both his rook and bishop are attacked after ...fxe2, but neither can he squirm out of the problems confronting him on both ends of the board after 15 Rf2 Qd1+ 16 Rf1 Qc2.

This is not the end of the story, however. Instead of 11 Nf5, Korchnoi has suggested that 11 Bf4 might favor White. And I remember, from six years ago, examining 11 Nbd2 with the idea of sacrificing a knight for

two pawns, Ndx3! I recall how surprised and impressed I was by White's practical chances after the Black bridgehead gets vaporized.

I mention my recollections from six years back; over the board I was pretty much at the end of my store of concrete data on the opening, although of course I still had a general foreknowledge of plans and themes for the coming middlegame. I did not specifically remember either of the variations given in the preceding paragraphs, after the last diagram, but there is an obvious echo of Fischer's 9 h4 Nf6! line in a possibility that I discovered and wrestled with during the game: 9 g3 g4 10 Nh4 Nxd4!? 11 cxd4 Bxd4+ 12 Kh1 Qxe4+ 13 Ng2 f3 14 Bxf7+ (14 Nf4) Kd8 15 Nf4 Bf5 and it would be probably too much to hope for 16 Bxg8? f2+ 17 Ng2 Qxg2+ 18 Kxg2 Be4+ 19 Qf3 Bxf3#

that throws all your meticulous fortifications into confusion. So I was pleased to see White's last move, because it indicated that he had come up empty in the main arena, and so was reduced to recovering a stray pawn.

22 ... Nb7

It's alive!

23 Ne4 Qg6

24 Bd3 f5

25 Nd2 e4

Not a bad pawn constellation. Unfortunately I got carried away with the momentum of battle and messed it up a few moves later.

26 Bc4 Na5

27 Bb3 Qb6+

28 Kh1 e3?!

Unnecessarily exposing the pawn bulwark that has served me so well thus far. I should have lined up on his king, 28...Bb7!, with all sorts of line-clearing combinations in the offing.

29 Nxf3

Of course White seizes the chance to destroy The Obstacle with a sacrifice that he'd like to have made some time ago. It is too little, too late, but White undoubtably gets some practical chances now, as the game opens up and the avenues towards Black's king come clear.

29 ... gxf3

30 Rxf3 Nxb3

31 axb3 Rb8

So now Black must be a little bit careful. For instance, 31...Bd7 32 Rfxe3 Rae8 33 Rxe8 and neither 33...Bxe8 34 Re6 Qa5 35 c4; nor 33...Rxe8 34 Rxe8+ Bxe8 35 Qxf5 looked like what I wanted.

The normal impulse when a piece ahead is to simplify, but in this case I considered that Black should activate the extra bishop and use it for attack. The key is the removal of the d5 pawn, the same pawn that impeded

White's pieces earlier. Now it clogs the diagonal of *my* bishop to White's king, and its removal will more than compensate for the loss of e3.

But how to proceed? Of course 31...Bb7 is met with 32 Rxf5, both attack and defending. A longer term problem is that d5 has a secure defender in the wings in pawn to c4. The oblique purpose of the text move is to tempt White's pawn to b4 and so give his c-pawn a task to do right where it stands, thus inhibiting it from supporting the true target. In the game at least this plan worked to perfection.

32 b4 Qd6

Already we see the effect: White can't go 33 c4 without simply losing b4. Instead he moves his queen to an exposed square. The pin on the d-line against his undefended queen allows my own c-pawn to mobilize.

12TH TIDEWATER CHESS NEWS OPEN

YOUNG VIRGINIANS SCORE IN K-12 CHAMPIONSHIPS

by Peter Hopkins

Bret Latter, from Louise Archer Elementary School in Vienna, Sean Clendening, from Westwood Hills Elementary in Waynesboro, and Jack Barrow, from Clover Hill Elementary in Midlothian, gave good accounts of themselves in the 4th grade section of the 1998 National K-12 Scholastic Grade Championships, in Oak Brook, Illinois over the weekend of December 4-6. Bret was 14th with a 5-1 score, Sean placed 25th with 4½ points, and Jack 28th with a score of 4-2 in a field of 214 4th graders from throughout the US.

Bret's score was one game off the 2-way tie for 1st, and a half point shy of tying

for 3rd. Losing only to Rishi Sethi, of Illinois, in the 3rd round, Bret bested two other Illinois players as well as opponents from Indiana, California and New Jersey.

After making a draw in the 3rd round against Connecticut's Garret Browning, Sean's only loss came in his 4th round game against California's Daniel Schwartz. Sean's 4 wins came against opponents from Illinois, Ohio, New York and North Carolina.

Jack scored wins over opponents from Illinois, California, Michigan and Tennessee. In the 4th round he lost to New York City 4th grade champion Allen Weiss, who eventually placed 4th.

Jack's other loss came at the hands of New Jersey's Vadim Chernyak.

Also of interest was the performance of Cooper Jones, recently of Richmond but now a resident of Memphis, Tennessee. Cooper placed 19th in the 66-player 1st grade section with a score of 4.

More and more of our young Virginia chess players are gaining national recognition. Giles County star Courtney Olsen is among the country's top 10 girls under 16, while James Hare is on the top 50 list of 15-16 year olds. Two younger boys are now in the top 50 among 9-10 year olds and three of our young ladies are among the top 50 girls in the under-13 age group.

ZOFCHAK MEMORIAL

by Rodney Flores from Tidewater Chess News

NM Errol Liebowitz won the 9th edition of Tidewater's biggest tournament, November 14-15, with a rock-solid $4\frac{1}{2}$ - $1\frac{1}{2}$. His only draw came in the 4th round when the number 1 and 2 seeds met. Errol had a slight advantage in the middlegame against expert Rodney Flores but failed to add on to it in a bit of two-sided time pressure prior to move 40. When the smoke cleared it was Errol with knight and 3 pawns against Rodney with rook and pawn.

The last round pairings saw both leaders facing much lower-rated opponents: Errol versus Larry Doughty and Flores against one of his students, Rob DeBois. A two-way tie for first looked inevitable, but the chess gods intervened. Errol's game appeared to be anything but easy, with Larry giving him a run for his money before succumbing. Rob played a gambit in the Center Counter against me but lost his initiative, and I began to coast in "trade mode." What happened next is every chess coach's dream/nightmare come true. I reached a bishop and 5 pawns versus bishop and 4 pawns ending where I could not figure the win, and Rob held the draw! (In the post-mortem, Errol came over and showed me the way to win the endgame. I was very impressed with his endgame prowess... It showed me something to shoot for in that area of the game.)

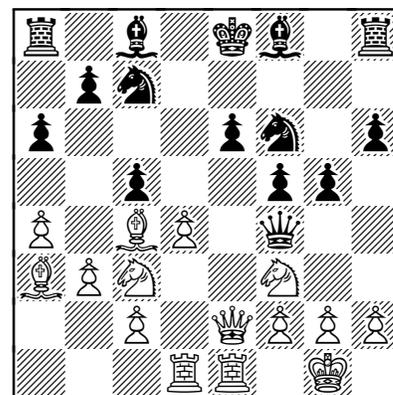

There ensued a logjam for 2nd place at 4-1 between Flores (also top X), Danny Derby (also top A), Ilya Kremenshosky (also top B), and DeBois (also top D!). Top C player went to Rich Koch with $3\frac{1}{2}$ points. First through third in the scholastic division went as follows: Ryan Arab, Daniel Newman, and Richard Bulaclac.

Danny Derby - Marcial Padua Lisitsin Gambit

Notes by Danny Derby [D] &
Rodney Flores [F]

1 Nf3 f5 2 e4 d6 (Marcial eschews the gambit [F]) **3 Nc3 Nf6?!** (This move appears to be where Black starts to go wrong. Hard to believe it can happen on move 3, but lack of opening preparation can sometimes kill you—I should know. $3...e5$ 4 d4 Nf6 5 exf5 Bxf5 6 dxe5 \pm ; $3...fxe4$ 4 Nxex4 e5 [F]) **4 e5 dxe5 5 Nxe5 e6 6 Bc4** (\pm White has a lead in development, pressure on e6 and the half-open e-file. Simple chess should work here. [D] I feel like White already has a clear advantage. He wastes no time attacking the backward e6 pawn. [F]) **6...Qd4?** (Makes matters worse—see note to move 6. This allows more development

where the queen becomes a target. [D]) **7 Qe2 c6 8 Nf3 Qd6 9 a4** (I wanted to preserve the bishop on the a2-g8 diagonal so I prevented a possible b7-b4 followed by a c5-c4 push. [D]) **9...h6 10 0-0 Na6!** (Danny gave the exclamation for the ingenious defense of e6 [F]) **11 Re1 Nc7 12 Ne5** (I would really hate that knight!! [F]) **g5! 13 b3 a6 14 Ba3 c5 15 Rad1 Qd4 16 Nf3 Qf4 17 d4! +-**

17...g4 18 Ne5 Qg5 (18 cxd4 19 Bc1 wins [F]) **19 d5 f4 20 Qd2 f3** (He wants to trade queens. I figured this was okay since the continuation that follows is forced. It is the culmination of a big lead in development and pressure. [D]) **21 Qxg5 hxg5 22 Ng6 Rg8 23 Nxf8 Kxf8 24 Bxc5+ Kf7 25 d6! Nce8 26 d7 Bxd7 27 Rxd7+! ARLINGTON CHESS CLUB CHAMPIONSHIP

The largest club in the Old Dominion, DC, and Maryland, eleven years without a formal club championship! Impossible! Not any more!

by Mike Atkins

The first formal club championship since 1987 was held over the Dec 12-13 weekend at the same site as last time, the George Mason University Law School cafeteria. The reigning champ, the late Jack Mayer would have surely been here to defend his title, and his wry jokes wafted through the air even now....

Krishna Sudharsan won the Amateur title with a perfect 4-0. He almost switched into the open at the last minute, but in the end seemed glad he didn't! David Sterner, Herman Louie and Mark Pennybacker (who brought top under 1500 money into the 2nd-3rd pot) tied for 2nd-3rd with 3-1. Michael Dervan took top under 1200 with 1½.

The Open section — and club champion's laurel — went to IM Eugene Meyer with 3½ points. He gave up a draw to his brother John, but otherwise was the dominating force one might have expected. Well, actually he trailed Phil Collier by ½ point going into the final round. But IM Meyer dispatched Collier while Steve Greanias was defeating John Meyer, which left Eugene in clear first. Collier wound up second (3-1) and masters Ram Avramhami, John Meyer, Steve

Greanias & Nelson Egbert comprised a 4-way tie for 3rd.

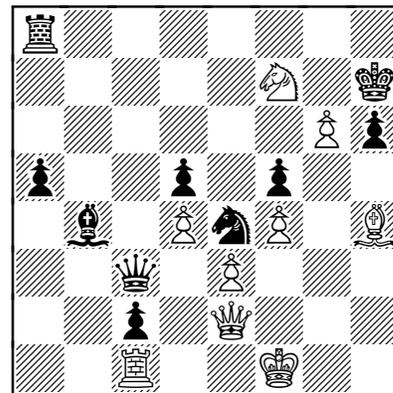

The 1999 Arlington Chess Club Championship will most likely happen in May.

Eugene Meyer - Nelson Egbert
English

1 c4 Nf6 2 Nc3 e5 3 Nf3 Nc6 4 g3 d6 5 Bg2 g6 6 d4 exd4 7 Nxd4 Nxd4 8 Qxd4 Bg7 9 b3 0-0 10 Bb2 Nd7 11 Qd2 Nc5 12 Rd1 Bd7 13 h4 Bc6 14 Bxc6 bxc6 15 h5 Qe7 16 b4 Ne4 17 Nxe4 Qxe4 18 f3 Qe6 19 Bxg7 Kxg7 20 hxg6 Qxg6 21 Kf2 Rae8 22 Rh4 f5 23 Rdh1 Kg8 24 Rh5 Qf7 25 R1h4 Re6 26 Rg5+ Kh8 27 Rf4 Qf6 28 Rgxf5 Qxf5 29 Rxf5 Rxf5 30 Qd4+ Kg8 31 Qg4+ 1-0

ACC BLITZ TOURNAMENT OF CHAMPIONS

by Mike Atkins

Sometimes, being an experienced international player isn't enough in the fast paced world of WBCA blitz. Sometimes it's more important just to be fast and accurate and tactical. Sometimes, needing the money can make a player more aggressive and decisive... Whatever the reason, Thomas Murphy was the upset winner at the 4th annual Arlington Chess Club WBCA Tournament of Blitz Champions, held on December 11, 1998.

The event was a twelve player round-robin contest with a field consisting, as always, of the previous year's champion (Fred Garcia) and the winners of monthly qualifying tournaments held throughout 1998, plus an "at large bid." Two qualified players did not turn up, resulting finally in a ten man field.

This year's championship began with two clear favorites, IMs Eugene Meyer and Larry Kaufman. On the other hand Murphy, recently arrived to DC from the Philadelphia area with an OTB rating around 2080 and a WBCA rating of 2240, wasn't expected to win — except by Alex Passov, who stated before the event that Murphy was the strongest blitz player in the tournament and would win! Remind me not to bet against Alex! With hindsight we might have noticed that

Murphy won or tied for each blitz event he played at ACC this year, plus he did very well in the World Open WBCA event, getting a plus score in a tough field and splitting his games with GM Pavel Blatny.

Murphy was 2 points ahead of the field with 2 rounds to go; only a complete choke would prevent him from locking up the title. The IMs were playing one another in the penultimate round, so there had to be a decisive game here to force Murphy to score anything. But

the Kaufmans teamed up to keep things interesting to the end, with son Ray handing Murphy his only defeat while Dad Larry beat Meyer. This set up Murphy with having to score in the last round to ensure the title. He quickly drew with William Marcelino, leaving the top three at Murphy (9-2), L Kaufman (8^{1/2}) & E Meyer (7^{1/2}).

Murphy thus becomes the first qualifier for the 1999 Championship.

BLINDFOLD CHESS - PART 3

JOHN CAMPBELL IS RESPONSIBLE for urging me to cover, if only briefly, the psychological background of blindfold chess. The book *Thought and Choice in Chess*, by Adriaan D deGroot (Professor of Applied Psychology and Methodology, University of Amsterdam), Basic Books, Inc, New York, 1965 is a good place to begin your investigation of this fascinating problem. In addition there are dozens of articles in the psychological literature. Particular authors to look for include: N Charness, W G Chase and H A Simon, N J Cooke, R S Atlas, D M Lane, and R C Berger.

My father was a checker expert, and he once told me that in checkers the expert had to be able to recognize some 20 positions, after which it became a matter of technique to win the game.

Chase and Simon postulate something similar among chess players to account for a superior selection of chess moves. They term this ability "pattern-based retrieval." The problem is more complex, but I will leave it to the truly interested to survey the literature for further information.

George Koltanowski's book *In The Dark* gives an account of a blindfold exhibition against first-class opposition given in tandem by Koltanowski and Dr Alexander Alekhine. Twenty-four opponents were grouped in consultation at six boards of four players each. The tandem players were not permitted to consult together. Playing the White pieces, they made alternate moves on each board. They completed this unusual exhibition in five hours, the masters winning three of the games, drawing two and losing but one.

As Koltanowski points out, tandem blindfold chess is very difficult inasmuch as you must not only understand the workings of the minds of your opponents, but also fathom the plans of your partner.

Here are two games from this remarkable exhibition, conducted in Antwerp, 1934.

Alekhine & Koltanowski - Chessboard Chess Club Sicilian

1 e4 c5 2 Nf3 Nc6 3 d4 cxd4 4 Nxd4 d6 5 Nc3 g6 6 Bb5 Bd7 7 0-0 Bg7 8 Nb3 Nf6 9 Kh1 0-0 10 f4 Qc7 11 Qe1 Rac8 12 a3 Rfd8 13 Qh4 e6 14 Bd3 Ne7 15 Be3 Bc6 16 f5 exf5 17 exf5 Ned5 18 Nxd5 Nxd5 19 Bg5 Re8 20 Rf3 Bd7 21 Raf1 Re5 22 fxd6 fxd6 23 Rf7 Ne3 24 Rxd7+ Kxd7 25 Qh6+? (25 Bxd6! wins - Koltanowski) 25...Kg8 26 Bxe3 Be6 27 Nd4 Bd5 28 Bg5 Qd7 29 Bf6 Rh5 30 Qf4 Rf8 31 c4 Bxd6+ 32 Kxd6 Qh3+ 33 Kg1 Qxd3 34 Qg3 Qxc4 Here Koltanowski states: "adjudicated a win for White," whereas the Spanish book on blindfold chess *Ajedrez a la Ciega*, by Benito Lopez Esnaola, gives the following continuation: 35 Qxd6 Rd5 36 Qe6+ Rf7 37 Nf3 *Abandonan* I have no idea whether the closing moves were actually played, or were the result of analysis for adjudication.

Alekhine & Koltanowski - Flemish Chess Club Ruy Lopez

continued

After the exhibition Alekhine stated (modestly?) that he considered Koltanowski the second-best blindfold player in the world.

Returning to the mechanics of blindfold play, I wish to emphasize that there is much more involved than mere "pattern-based retrieval." What is needed is an article summarizing what is known, instead of itemizing isolated aspects of this ability.

Editor's note: I would be surprised if such an article has not, in fact, been written. Some psychologist among our readers may wish to clue us in.

PENINSULA QUICK CHESS

by Dave Stiffler

The first Peninsula Quick Chess Tournament was held at Thomas Nelson Community College on 21 November. Jason Earley took clear first, going undefeated in the five-round, G/29 format. Clear 2nd was Kelly Ward with 3 points. There was a four way logjam for 3rd place: Tom Belke, Jerry Cano, Tim Schmal & Joe McIntyre.

Overall it was a fun tournament, and well run by Tim. The fact that we were finished and the prizes handed out before 4pm was nice, too. I am hoping that attendance will rise as Tim holds more of these in the future. Thomas Nelson is located right off I-64 West in Peninsula, and can be reached from most places on the southside in about 30 minutes. Folks also play at TNCC every Thursday evening from 7-9pm. Come on out and have some fun!
